According to the ONFP procedure, clones that display the same hybridisation matrix with a battery of 200 8mer oligonucleotides are grouped into clusters. One clone per ONFP cluster was selected for sequencing. cDNA clones and filters are distributed via Deutsches Ressourcenzentrum fuer

                                                                                                                                                                                                                                                                                                                                                                   Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Instead of the constructed, normalized and subtracted by Dr. A. Hernandez, M.M. Keck Center, University of Illinois Urbana-Champaign and S. Degrelle, BDR, Institut National de la Recherche Agronomique, France, as described in Bonaldo, M.F., Lennon, G. and Soares, M.B. (1996), Genome Research (9): 791-806. This clone is from library BBO4, a normalized library of embryonic tissues subtracted with 7800 known placental EST sequences and 5000 clones from the BBO3 library. The double stranded cDNA was size selected (more than 450 bp), adaptored with BCORI adaptors at both ends and then digested with NotI. The cDNA was then directionally cloned into EcoRI-NotI digested pGEMI1Zf(1) phagemid vector. Insert size was between 450-2200 bp. Sequencing was done from the 5' end of the clone. Tagged oligo-dT was used to identify the source of the ESTs where possible. (A18)TGCGT = extrambryonic tissue; (A18)TGCGT = 36-day old fetus; (A18)TCGGA = 64-day old fetus (organs); (A18)TCGGA =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        USA

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomforschung GmbH (http://www.rzpd.de).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 (bases 1 to 738)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AUTHORS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ORGANISM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Email: renard@jouy.inra.fr
Funding for EST sequencing was provided by funds dedicated to Funding for EST sequencing was provided by funds dedicated to J.P.RENNARD (BBR, Inra). Funding for construction and subtraction of the cDNA library was provided by USDA ARS contract No 58-1275-2-020 to H. A. Lewin The cDNA library was constructed, normalized and subtracted by Dr. A. Hernandez (W.M. Keck Center, University of Illinois Urbana-Champaign) and S. Degrelle (BBR, Inra) as described in Bonaldo et al. (1996), Genome Research 6, 791-806, BE03 library is a normalized library of embryohic tissues subtracted with 7800 known EST sequences. The double-stranded cDNA was size selected (+450 bp), adaptored with ECORI abaptors at both ends and digested with Not1. The cDNA was then direttionally cloned into EcoRI-Not1 digested pEMNIZE(+) phagemid vector. Insert size was between 450-2200 bp. Sequence cleaned of vector, adaptator and repetitions. According to the ONFP procedure, clones that display the same hybridisation matrix with battery of 200 8mer oligonucleotides are grouped into clusters. On clone per ONFP cluster was selected for sequencing. CDNA clones an filters are distributed via Deutsches Ressourcenzentrum fuer Genomforschung GmbH (http://www.rzpd.de).

                                                                                                                                                                                                               Funding for EST sequencing was provided by funds dedicated to J.P.RENARD (BDR, Inra). Funding for construction and subtraction of the cDNA library was provided by USDA ARS contract No 58-1275-2-020 to H. A. Lewin The cDNA library was constructed, normalized and subtracted by Dr. A. Hernandez (W.M. Keck Center, University of Illinois Urbana-Champaign) and S. Degrelle (BDR, Inra) as described in Bonaldo et al.(1996), Genome Research 6, 791-806. BE03 library is a normalized library of embryonic tissues subtracted with 7800 known EST sequences. The double-stranded cDNA was size selected (>450 bp), adaptored with EcoRI adaptors at both ends and digested with NotI. The cDNA was then directionally cloned into EcoRI-NotI digested pGEM11Zf(+) phagemid vector. Insert size was between 450-2200 bp. Sequence cleaned of vector, adaptator and repetitions. Funding for EST sequencing was provided by funds dedicated to
J.P.RENARD (BDR, Inra). Funding for construction and subtraction of
the cDNA library was provided by USDA ARS contract No 58-1275-2-020
to H. A. Lewin The cDNA library was constructed, normalized and
subtracted by Dr. A. Hernandez (W.M. Keck Center, University of
Illinois Urbana-Champaign) and S. Degrelle (BDR, Inra) as described
in Bonaldo et al.(1996), Genome Research 6, 791-806, BE03 library
is a normalized library of embryonic tissues subtracted with 7800
known EST sequences. The double-stranded cDNA was size selected
(*450 bp), adaptored with EcoRI adaptors at both ends and digested
with NotI. The cDNA was then directionally cloned into EcoRI-NotI
digested pGEM11Zf(+) phagemid vector. Insert size was between
450-2200 bp. Sequence cleaned of vector, adaptator and repetitions.

Funding for EST sequencing was provided by a Genanimal contract from FNS- Ministere de la Recherche (INRA, Num: A02085). Funding for construction and subtraction of the cDNA library was provided by USDA ARS contract No. 58-1275- 2-020 to H. A. Lewin The cDNA library was constructed, normalized and subtracted by Dr. A. Hernandez (W.M. Keck Center, University of Illinois Urbana-Champaign) and S. Degrelle (BDR, Inra) as described in
                                                                                                                                                                                              Contact:

(1996), Genome Research 6, 791-806. BE04 library is a normalized library of embryonic tissues subtracted with 7800 known EST sequences. The double- stranded cDNA was size selected (>450 bp), adaptored with EcoRI adaptors at both ends and digested with NotI. The cDNA was then directionally cloned into EcoRI-NotI digested pGEM12f(+) phagemid vector. Insert size was between 450-2200 bp. Sequence cleaned of vector, adaptator and repetitions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of this sequence.

                                                                                                                                                                             He,J., Magarvey,N., Piraee,M. and Vining,L.C.
The gene cluster for chloramphenicol biosynthesis in Streptomyces
venezuelae ISP5230 includes novel shikimate pathway homologues and
a monomodular non-ribosomal peptide synthetase gene

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        para-position by a nitrogen-containing group. The transformant organism of the present invention has been produced by transferring a gene participating in the biosynthesis pathway from chorismic acid into paminophenylpyruvic acid. The present sequence is the coding sequence for 4-amino-4-deoxychorismic acid mutase (papB), from Streptomyces venezuelae. papB participates in the biosynthesis pathway from chorismic acid into p-aminophenylpyruvic acid, and so the papB gene can be used to produce the transformant of the present invention. The transformant can be used to produce metabolites for application in pharmaceuticals, veterinary drugs and agrochemicals
